

DON'T LEAN YOUR CAR ON THE FORTUNE,
LEAN IT ON NO JACK®!

THE FIRST AUTOMATIC ANTI-THEFT
AND ANTI-BURGLARY DEVICE
FOR ALL CARS.

In case of robbery the engine of the car safely stops with a delay. If the central unit fails to receive decoding sequence of signals, the vehicle cannot be stolen even with its original keys. If theft occurs and the device is activated, it will block the electronics required for the operation of the engine (ignition, fuel pump, magnetic valve etc.). This will take place with 60 second delay. Meanwhile the central unit will read out a message and activate the emergency warning lights.

Technical data:

- power supply: 9-22V
- power consumption: 7mA
- automatic transmitter: CR 2477 lithium battery
- battery life: several years (the device will tell you when the battery needs to be replaced)
- the device has been certified by T
ÜV + CE + E + MABISZ

No Jack Ltd. (1136 Budapest, Tátra utca 43. ground floor 1. Tel./Fax.: 350-72-66; 06-30/950-76-55 info@nojack.hu www.nojack.hu) is the manufacturer, main representative and exclusive seller of **NO JACK!**® in Hungary. info@nojack.hu, www.nojack.hu

THE ADVANTAGES OF NO JACK!®

ABSOLUTELY USER-FRIENDLY SEEING IT IS AUTOMATIC AND DOES NOT REQUIRE MAINTENANCE.

ONE-OFF COST (NO MONTHLY FEE)

LIFETIME GUARANTEE!

Burglary: The vehicle will stop after 180 seconds if the engine of the car is running and the owner is forced to leave the vehicle (and the transmitter is in her/his pocket).

Theft: If the parked vehicle is started up by an unauthorized user, the engine will stop in 60 seconds. In both cases it will be possible to find the car within a relatively close distance.

CARS WERE, ARE AND WILL BE STOLEN.

YOU CAN GET A CHEAPER ONE, BUT NOT A BETTER ONE!

LIFETIME GUARANTEE!

CARS WERE, ARE AND WILL BE STOLEN.

When you buy a car there are many things to consider: e.g.: the colour, power of the engine, what extras it should be equipped with, but in most cases we forget about how the vehicle worth a small fortune will mostly have to be left on the street and as long as this is the case, there will always be someone out there wanting to steal it. Then we ask ourselves:

HOW SHOULD WE PROTECT OUR VEHICLE?

Car alarm?

Due to the multitude of poor quality, cheap alarms that go off at any time without reason, we have to conclude that nobody ever takes much notice of them these days, people just do not pay attention to a car whose alarm has gone off. (In any case it only takes a professional a few seconds to switch the alarm off.)

Gear lock?

This is an extremely effective preventive mechanism, but it doesn't offer any protection against burglary.

GPS tracking system?

Beyond its rather high price and monthly costs, do you want to be tracked around the clock and almost be prevented from having a normal private life? (Beyond how this no longer presents an obstacle for professionals, since it is extremely simple to deactivate this expensive device with a so-called GSM stop device freely available in the USA.) There was a report about this on TV in the Kékfény (Blue Light) programme on Hungarian National Television.

Anti-burglary device?

According to statistics of recent years, these devices are the most effective ones. We developed NO JACK! the automatic anti-robbery and anti-theft device bearing this, as well as convenience in mind.

ENGINE BLOCK

The primary task of the NO JACK! vehicle protection device: safe delayed shutdown of the engine of the vehicle in the event of burglary; effective anti-theft protection for parked vehicles. The system consists of two units: The central unit installed in the vehicle, including the receiver and the automatic radio frequency transmitter.

INACTIVE

If the owner is inside the vehicle or in its immediate vicinity, the central unit is able to identify the decoding signals automatically emitted by the transmitter and will remain inactive. This status remains for every 180 seconds after a sequence of signals. If no further signal sequences are emitted by the transmitter during this period, the central unit will be activated after 3 minutes. The only purpose of the transmitter is to override the central unit, activation is automatic.

Important: If the central unit fails to receive a decoding signal sequence, the vehicle cannot be stolen even with its original key.

ACTIVE

If the vehicle is stolen while the central unit is active, it will switch off the electronic devices required for switching the engine on (ignition, fuel pump, magnetic valve etc.). This happens with a delay of 60 seconds. In the meantime the central unit will read out a message and set off the emergency warning lights. The engine will switch off and will remain so until the owner's automatic transmitter sends out new decoding signals.

DELAY

The advantages of NO JACK! in the case of BURGLARY or theft:

- Burglary:** If the engine of the car is running and the owner is forced to leave the vehicle (with the transmitter in her/his pocket), the vehicle will stop after 180 seconds.
- Theft:** If the parked vehicle is started by an unauthorized user, the engine will stop within 60 seconds. In both cases it will be possible to find the car within a relatively close distance.

PROFESSIONAL INSTALLATION

Never keep the transmitter where you keep your car keys! The device should be installed by a professional mechanic to avoid damages to the electronic devices of your vehicle. The NO JACK! device is sold with two transmitters. If you lose the transmitter, you can order a replacement from our customer service or at the place it was installed by presenting the original invoice which must contain the serial number of the device.

CUSTOMER SERVICE

To contact our customer service call 06-1/350-72-66 on weekdays from 9 am to 4 pm. Please call 06-30/950-7655 in an emergency.
